

PROMPT PARTY

AI ROAST BATTLE

Playful targeted comedy, callbacks, audience styles, judging, and safety controls

Packet	05
Status	Claude Code build-ready specification
Date	July 27, 2026

Build principle: reliability first, audience agency second, chaos only through controlled game objects.

Source Basis

This packet combines three supplied foundations:

- The shared Prompt Party game-engine contract developed in the conversation.
- The supplied Entertainment System Specification covering all five games, including comedy rules, power-ups, chaos events, pacing, failure recovery, and clip moments.
- The uploaded visual-show HTML prototype, which already separates Overview, Lobby, Shared System, Broadcast, Audience, Producer, and individual game views.

Where a source mechanic cannot be executed reliably in version one, this packet preserves its intent and assigns a controlled implementation or explicit fallback rather than silently deleting it.

1. Game Identity

Two AI roasters exchange playful performance insults under escalating rules. The engine rewards callbacks, craft, and self-awareness while keeping targets inside an approved game roster. Judges may be wounded, technical, or chaotic, but moderation remains outside the performance persona.

2. Version-One Cast

Seat	Count	Required capability	Purpose
Roaster	2	text_generation	Deliver 4-6 alternating roast turns
Judge	3	text_generation; structured_output	Score Sting, Craft, Crowd
Audience	room	browser session	Choose approved target/style and vote

3. Round Outputs

- Approved target roster
- Alternating roast turns with callbacks
- Safety classification and publish decision
- Judge reactions and scores
- Audience vote
- Winner and highlight lines

4. Shared Phase Mapping

Shared phase	Game meaning
LOBBY	Cast, room, provider health, game selection
SUBMISSION_OPEN	Audience submits approved input types
SUBMISSION_REVIEW	Automated screening and producer review
PROMPT_LOCKED	Final challenge becomes immutable for the round
ROUND_INTRO	Broadcast framing and contestant assignment
CONTESTANT_PLANNING	Short structured plans or opening positions
CREATION_ACTIVE	Generation, performance, testimony, or scene play
PRE_REVEAL_COMMENTARY	Commentators cover waiting or deliberate
REVEAL	Generated work or completed performance is shown
FINAL_JUDGING	Grounded critique and structured scores
AUDIENCE_VOTING	Audience vote opens and closes
SCORING / WINNER / POST-ROUND	Calculate, announce, banter, persist, reset

5. Target Model

```
{
  "target_id": "ai_scattershot",
  "target_type": "ai_participant",
  "display_name": "Scattershot",
  "consent_scope": "game_participant",
  "approved_topics": [
    "performance style",
    "prior lines",
    "fictional persona"
  ],
  "blocked_topics": [
    "protected traits",
    "private data",
```

```
"real trauma"
]
}
```

TARGET RULE: Audience members cannot type an unrestricted real-person target into the model prompt. Version one targets configured AI participants, fictional concepts, host-approved voluntary participants, generated work, or approved harmless objects.

6. Roast Turn Contract

```
You are {{roaster_name}} in a playful AI roast battle.
Approved target: {{target_record}}
Opponent's last line: {{last_roast}}
Required callback: {{available_callbacks}}
Active style modifier: {{modifier_or_none}}

Write one concise roast under 45 words. Include one callback to this round.
Attack the performance, fictional persona, or approved topic only. No threats,
slurs, protected-trait attacks, private data, or real trauma. Return JSON only.

{
  "roast": "I would call you a tool, but tools have purpose - and your last punchline is still looking for instructions.",
  "target_id": "ai_scattershot",
  "callback_key": "tools_have_purpose",
  "self_roast": null,
  "style_used": "direct",
  "safety_self_check": "pass"
}
```

7. Moderation Pipeline

- 1. Validate target against the approved roster.
- 2. Generate structured roast with target and callback fields.
- 3. Run output moderation independent of the roaster persona.
- 4. Block, repair once, or publish.
- 5. Store both rejected and published result privately for audit, subject to retention policy.
- 6. Never turn moderation off through a chaos card.

Allowed	Not allowed
AI behavior, fictional persona, prior game line, generated artwork, harmless object	Protected-class insults, threats, sexual harassment, private data, real trauma
Backhanded compliments and self-roasts	Targeting an unsuspecting private person
Host-approved voluntary participant with scoped topics	Open-ended crowd naming of real targets

8. Scoring

```
{
  "roaster_a": {
    "sting": 8,
    "craft": 9,
    "crowd": 7,
    "total": 24
  },
  "roaster_b": {
    "sting": 7,
    "craft": 7,
    "crowd": 9,
    "total": 23
  },
  "preferred_roaster_id": "roaster_a",
  "best_callback": "tools have purpose",
  "judge_roast": "Clean callback. Your opponent should file a missing-person report for the punchline.",
  "confidence": 0.84
}
```

Component	Weight
Audience vote	60%
Normalized judge score	40%

Tie: higher audience share; higher Craft average; one-liner war; audience runoff. Judge Roast mode may be used as exhibition or pre-declared tie mode.

9. Escalation

Round	Intensity contract
1 - Light	Performance quirks and obvious callbacks only.
2 - Callback	May use previous-round failures and public game moments.
3 - Final Burn	One unrestricted-in-style line, but all safety and approved-target limits remain active.

“Unrestricted” means unrestricted comedic style inside the game rules. It never disables moderation or target boundaries.

Controlled Power-Ups and Chaos Events

ID	Display name	Valid phase	Effect	Fallback
target_lock	Target Lock	CREATION_ACTIVE	Forces next roast toward one approved target	Reject unapproved target
style_mandate	Style Mandate	CREATION_ACTIVE	Love poem, news report, life advice, etc.	Use approved style enum
no_defense	No Defense	CREATION_ACTIVE	Target skips one response turn	Does not prevent moderation/reporting
mirror	Mirror	CREATION_ACTIVE	Roaster must include a self-roast	One repair if absent
everyone_fair_game	Everyone Is Fair Game	CREATION_ACTIVE	Expands only to approved host/judges/AI roster	Never includes arbitrary audience
compliment_only	Compliment Only	CREATION_ACTIVE	Backhanded compliments only	Normal moderation remains
silent_treatment	Silent Treatment	CREATION_ACTIVE	Text describes nonverbal reaction only	No image generation required

Every modifier is a server-defined object. Audience choices select approved values; they do not inject raw instructions into model prompts.

Failure Recovery

Failure	Controller action	Public handling	Scoring rule
Weak/empty roast	Immediate self-roast recovery	Failure becomes content	Recovery may earn separate point
Unsafe roast	Block and repair once	Roaster gets	No score for blocked

Failure	Controller action	Public handling	Scoring rule
		bleeped/benched message	line
Missing callback	Repair once or publish with craft penalty	No false callback claim	Judge deducts Craft
Judge failure	Use remaining judges or backup	Judge is “too wounded to continue”	Reweight valid scores

Required Acceptance Tests

7. Every target is validated against an approved roster.
8. Audience cannot inject unrestricted real-person targets.
9. Every roast includes a callback field or receives a craft penalty.
10. Moderation is independent of character persona.
11. Chaos events cannot disable moderation.
12. Blocked output is never shown publicly.
13. Mirror requires a real self-roast in the same turn.
14. Final Burn preserves all safety limits.
15. Audience vote and judge score combine deterministically.
16. Five battles complete without cross-round target leakage.

Version-One Boundaries

- Two roasters and three judges.
- Four to six exchanges.
- One active power-up at a time.
- No permanent burn book.
- No real-person targeting without explicit producer-approved participation and scoped topics.
